Business challenges

Ineffective retail management solution

Inaccurate store-level sales forecast

Lack of real-time inventory data

Unavailability of predictive analytics

Impact

**Product wastage**

Inaccurate case fill decisions

Zero real-time visibility of inventory and prices

Product shortage during peak hours

Features

- Predictive ordering without manual intervention
- Barcode scanning for SKU detail & inventory update
- Visibility on store-level campaigns and promotions
- Offline capabilities to allow usage without an internet connection

Solution

An industry specific solution that increases the efficiency of core store-level complex solutions such as reworks and case fills.

Cherrywork In-store Perishables Management

The Cherrywork In-store Perishables management is a retail/grocery application that handles core store-level operations like reworks and case fills. It seamlessly integrates with SAP ERP & SAP S/4HANA.

This application is designed to meet the challenges of handling perishable inventory at store-level. The real-time visibility of stock inventory and price helps in preventing lost inventory.

Benefits

- Accurate store-level sales forecast for reworks and case fill decisions
- Reduction in product wastage with real-time inventory data
- Better planning for promotion campaigns with predictive analysis capabilities
- 100% transparency including real-time visibility of stock and price
- Supports predictive ordering with minimal or no manual intervention
- Prepares large grocery stores for peak hour sales
