

Customer is a global provider of sustainable agriculture products & solutions including biologicals and traditional crop protection solutions. It also has a non-agro division comprising of industrial chemicals and pesticides etc. Being headquartered in Mumbai, it has operations spanning Latin America, Europe and China.

Business Challenges

Lack of visibility of warehouse spaces & various process management

Inefficient in tracking the activities

Cherrywork Smart Warehouse

Solution

- Dashboard panel to show a dynamic count of various processes (pending, receiving and shipping) taking place in a warehouse
- Reporting features are implemented to show the following features:
 - Details of incoming products of vendor and warehouse returns
 - Posting changes (materials stock data) in the warehouse
 - Display list of confirmed transfer order details, deliveries & post goods issue in the warehouse
 - Overview of bin structure, which displays bin layouts in different warehouses & their content status

Outcome

- Business users can view the current transfer requirements or post modifications across various warehouses in real-time
- The user can obtain a full breakdown of bin architecture and a list of the materials included in each bin for various warehouses
- Monitoring the contents of each bin in several warehouses and identifying empty bins
