

The customer is a Petroleum and natural gas exploration company headquartered in El Dorado. The company also has operating offices in Houston, Texas, Calgary, Alberta, and Kuala Lumpur, Malaysia

Business Challenge

Lack of real time visibility

The lack of integration between business processes running on disparate systems

Significant delay in processes and business decisions.

Difficult to locate and collate information in a timely and efficient manner

Emphasis on safety and environmental compliance (ESG score),

Integrated Operations Platform

Solution

- Integrated Operations Platform (IOP) - an intuitive application which unifies information and integrates business processes.
- IOP is a centralized cockpit where the company staff can manage operations, gain real-time visibility into tasks, and track assets accurately on a secure, multi-cloud infrastructure

Outcome

- 15% Increase in operation efficiency
- 60% reduction in process cycle time
- ROI realized in less than 1 year
- Improved User experience
- Optimized operations Mobile enablement for Field Operators
- Business Agility provided by 10-12 weeks Roll out approach
- Harmonizing the system landscape by Integrating 15+ Business processes
- Real time information from different IOT and systems.
- Improved Collaboration between Field Operator and Remote Command Center team
- Digitization of several manual processes, reduced carbon footprint by eliminating paper-based processes
