# Kitting Application

Assembly of BOM Components Through Kit Creation
- Can conveniently create a Kit containing all required BOM components .
- Streamlining the assembly process and ensuring accuracy.

Picking BOM Components
- BOM components can be efficiently picked and verified directly.
- Ensures that the correct type and quantity of each component is accurately loaded onto the kit.

Kit Consumption in Kitting plugin
- The Kits created can directly be consumed in Kitting POD Plugin by using Kit Id.
- Reduces manual errors that can be caused when assembling each component manually.

Automatic Kitting Entry Creation on Order Release in SAP DM
- When an order is released in SAP DM, the Kitting Application automatically generates a new entry containing the associated BOM and order details.
- Ensures seamless order creation and improved process automation.

Easy Picking with Quantity Reference and Visual Progress Tracking
- Supervisors can efficiently pick the correct quantities by referencing the available and required quantities on the picking card ensuring real-time tracking.

Easy Assembly of Components Using Kitting POD Plugin
- Operators can seamlessly load all kit entries along with the picked quantities.
- A visual indicator helps track progress by clearly distinguishing between partially assembled and fully assembled kits
