

Sketch to Style Journey

Streamline Your Design-to-Production Workflow with Sketch to Style Journey

Sketch to Style Journey is an integrated platform that transforms initial sketches into production-ready styles. Gain complete control over design details while maintaining seamless alignment with downstream processes.

Core Capabilities

Manage Style

- Centralized digital style catalog for full visibility.
- Attribute-level tagging for precise organization and fast retrieval.
- End-to-end integration with supply chain processes.

Manage Trims

- Unified trims library with images and specs.
- Accurate, up-to-date component selection.
- Reduced design deviations and faster decision-making.

Manage BOM

- Precise product structure creation and updates.
- Variant management and consistent data control.
- Flexible Excel-based refinements without compromising accuracy.

Create PO

- Direct PO creation aligned to design requirements.
- Accurate sample procurement with controlled workflows.
- Faster material readiness for sample development.

Produce Prototype

- Accelerated prototype development for rapid iteration.
- Integrated tracking of changes and refinements.
- Faster design validation without delays.

Sample Distribution

- End-to-end sample tracking and visibility.
- Structured feedback for style corrections.

Elevate Design Outcomes

Enhance traceability, ensure accurate BOMs, align procurement, and speed up design iterations—transforming sketches into production-ready styles with clarity and efficiency.
