

Cherrywork Master Data Governance

Cherrywork® Master Data Governance, built on SAP BTP, streamlines standard master data management with intelligent workflows and built-in validations to enable faster data creation, accelerated procurement, and seamless operations.

The Key Features

- **Highly Intuitive User Interface:** Simplify master data creation and governance with a user-friendly, business-led experience.
- **Real-Time Data Checks & SAP Lookups:** Validate and reference organizational ERP data in real time for accurate master data creation.
- **AI-Powered Duplicate Detection:** Prevent duplicate records and maintain consistent, trusted enterprise data.
- **Flexible Approval Workflows:** Configure multi-level role-based approvals and Delegation of Authority (DOA) to align with governance policies through a centralized cockpit.
- **Centralized Workspace & Request Bench:** Manage requests, approvals, and collaboration from a single control center.
- **Document Traceability & Management:** Maintain complete visibility into documents, request history, and audit trails.
- **Real-Time Insights & Reporting:** Track governance metrics, approvals, and process performance with actionable dashboards.
- **Multi-View Material Support:** Support multiple data views and business requirements within a governed framework.

What Sets Cherrywork® Master Data Governance Apart?

- Accelerated time-to-value with prebuilt governance patterns
- Business-led configuration with minimal IT involvement
- Unified governance across master data domains
- Flexible workflows and configurable business rules
- Built on SAP BTP for seamless extensibility
